1. ABOUT THE CONTROLLER

The is a one-station, ambient light (solar) powered controller that uses a patented energy management system to power the controller day and night. The controller requires no batteries, AC power or direct sunlight and can be installed above grade anywhere in the landscape.

Employing the latest in water conservation features, the ECO 1 can be pre-set to automatically adjust the watering durations according to regional seasonal changes.

Before beginning installation of the unit, please follow the steps below:

Remove the ECO 1^{TM} from the box and place it in the sun to charge for approximately 2 hours or 3 to 4 hours if cloudy.

2. COMPONENT IDENTIFICATION

2.1 ECO1 ASV WITH ANTI-SIPHON VALVE

- 1. Solar PVM
- 2. LCD screen
- 3.7 button keypad
- 4. Rain sensor connection
- 5. Quick reference label
- 6. Collapsible solenoid wire
- 7. Manual flow control
- 8. External bleed screw
- 9. DC Solenoid

- 10. Anti-siphon cap
- 11. Pipe thread outlet
- 12. Pipe thread inlet
- 13. Anti-siphon valve

2.2 ECO1 MVA MANUAL VALVE ACTUATOR

See section 4.1 to change adapters from the factory 3/4 in. assembly to the 1 in. assembly.

- 1 Solar PVM
- 2. LCD screen
- 3. Quick reference label
- 4.7 button keypad
- 5. Rain sensor connection
- 6. DC Solenoid
- 7. Collapsible solenoid wire
- 8. Manual flow control
- 9. External bleed screw
- 10 Actuator stem

Seat washer assemblies

3. SYSTEM COMPONENTS

LCD Display

- 1. Time and Date Indicates current time and day
- 2. Set Watering Days Choose either specific days, odd/even days, or up to once every 30 days
- 3. Start Time Up to 5 start times per day available
- 4. Run Time Watering duration from 1 minute to 6 hours
- 5. Manual Run Appears when manual button is pushed
- 6. Set ET Used to set one of the 20 SimpleSmart[™] presets
- 7. Set Monthly Budget Seasonal adjustment setting (0%-200%) in 5% increments or to fine-tune SimpleSmart[™] programming
- 8. Rain Delay Delay irrigation setting from 1-99 days with automatic restart
- 9. Events Off Suspends watering for any month or any specific day within the month.
- 10. Power Level Represents current charge level
- 11. Sensor Appears only when sensor is connected and active
- 12. Watering Appears when valve is open

Control Buttons

Select programming mode

Turn ON/OFF program

Start/stop a manual cycle

Move left/right to select a value

Raise/lower the selected value

4. ANTI-SIPHON VALVE INSTALLATION

The EC01 ASV.075 can be installed directly to PVC pipe. (Inlet 3/4 in. FNPT, outlet 3/4 in. FNPT.)

Operating pressure: 10 to 125 PSI

Recommended operating pressure: 10 to 80 PSI

NOTE: Wrap all fittings with Teflon tape.

Do not use pipe cement on the valve as this will damage the valve and void the warranty.

Make sure when wrapping fittings with Teflon tape that no excess gets into the internal assembly. Tighten the fittings with a wrench, but do not over tighten.

NOTE: The EC01 ASV.075 must be installed at least 6 in. higher than the highest sprinkler head on the system or back-drainage may occur. Additional control valves must **not** be installed downstream of the anti-siphon valve. The valve must not be operated continuously for more than 12 hours in any 24-hour period.

Consult local codes for specific details.

- 1. Flush main line until water runs clear before installation.
- 2. Shut off main water supply.
- Install the anti-siphon valve directly to PVC pipe using 3/4 in. PVC male adapter or use Schedule 80 nipple. The arrow on valve body indicates direction of water flow (see Figure 6).

- 4. Turn the main water supply on and pressurize the system.
- 5. To test the ECO 1[™], press the button. A click will be heard, indicating the valve is open. An icon of a droplet on the upper left of the screen and the run time remaining will appear on the display in 5 seconds. Check that the system is operating correctly and press the button again to turn it off. A second click will be heard indicating that the valve closed. The droplet icon and the manual icon will disappear from the display and OFF will appear momentarily; then the display will revert to the time of day.
- 6. Program the EC0 1[™] controller (see section 5).

4.1 CHANGING ACTUATOR ADAPTERS

The EC0 1[™] with actuator is factory set to fit a 3/4 in. brass manual anti-siphon valve. To install the controller with actuator on a 1 in. manual anti-siphon valve the 3/4 in. seat washer and adapter must be removed and replaced with the 1 in. adapter and seat washer, which are included in this box.

- 1. Turn the actuator so that the seat washer and the 3/4 in. threaded adapter face up.
- Using pliers, or a 5/18 in. wrench, remove the seat washer screw by turning counter clockwise and pull off the 3/4 in. seat washer assembly (see Figure A).
- 3. Push the 3/4 in. threaded adapter down towards the actuator to ease the tension on the retainer clip (see Figure B).

4. Next, place your thumb on one side of the retainer clip and with a pair of pliers grip the other side of the retainer clip and pull outwards, away from your thumb, and upwards, removing it from the base of the 3/4 in. threaded adapter then, remove the adapter (see Figure C).

FIGURE A

FIGURE C

5. Install the 1 in. threaded adapter by pushing it onto the actuator stem and making sure the notch on the adapter lines up with the notch on the stem of the actuator (see Figure D).

FIGURE D

6. Spread the retainer clip with your thumbs and push the retainer into the adapter until it clicks (see Figure E).

7. Install the 1 in. seat washer assembly as shown. Insert the seat washer screw into the bottom of the actuator stem and tighten turning clockwise (see Figure F).

NOTE: Do not over-tighten.

4.2 MANUAL VALVE ACTUATOR INSTALLATION

Operating pressure: 10 to 125 PSI

Recommended operating pressure: 10 to 80 PSI

- 1. Shut off main water supply.
- 2. Remove the manual stem from the existing valve and temporarily remove the anti-siphon cap (Figure A).
- 3. Replace any existing worn washers with the new ones provided (Figure B).
- 4. Install the actuator into the manual anti-siphon valve body by turning actuator clockwise. Tighten firmly, but do not over tighten (Figure C).

- 5. Turn actuator flow control knob clockwise until it stops to shut off flow (Figure D).
- 6. Turn on main water supply.
- 7. Activate the solenoid through the controller, a click will be heard indicating the valve is open. (The manual symbol will appear on the display.)
- 8. Turn the actuator flow control knob counter clockwise to allow flow and check the system to make sure that the sprinklers or the drip system is working properly (Figure E).

- De-activate the solenoid through the controller, a faint click will be heard and the valve should close. (The manual symbol will disappear and water flow will stop). If flow continues, turn flow knob clockwise, one full turn at the time until flow is completely shut off.
- 10. Repeat steps 7 and 9 and make sure that flow is turned on and off.
- **Note:** Turn flow control knob clockwise to decrease flow, counter-clockwise to increase flow. For low-flow drip systems below 60 gallons per hour, flow control knob should be turned no more than 1 to 3 turns up (counter-clockwise) from the fully closed position.
- 11. The unit is now ready to be programmed.

5. PROGRAMMING

In order to program the ECO 1^{TM} , you must first let the unit sit out in the light to charge. Please see page 3 on charging the ECO 1.

This section explains the programming features, and the steps necessary to assign irrigation schedules. To program the controller use the button to select the desired programming mode, the button to make the entry flash and the buttons to change the value.

NOTE: Only a flashing value can be changed.

NOTE: If the last data entered stops blinking, press 🚱 again to resume programming and repeat the steps.

6. SETTING TIME AND DATE

The controller can display the time in either a 12 or 24 hour format. To change the time format, from the home screen after the time has been set:

1. Press and hold the 🕜 button for three seconds until the display switches format (AM/PM disappears).

SETTING THE CURRENT TIME AND DATE

To enable the controller to operate properly, the current time and date must be set.

1. Press the O button, until the P icon appears along with the time and the day of the week.

- 2. If the current time has not been set and needs to be updated press 🚱 and the hour digit starts blinking.
- 3. To set the current hour, press \bigcirc or \bigcirc (note AM and PM designations).
- 4. To set the minutes, press 🚱 again and the minute digit starts blinking. Press the 🐼 or 🕜 to set the current time in minutes.

5. Repeat the steps to set the current date including, month, day and year. When the date is selected and updated, the day of the week will be update at the same time to correspond with the date.

6. Press O to proceed to the next step SET DAYS D or review the program.

Press 🕢 to move backward.

7. SETTING WATERING DAY SCHEDULES

Option 1 - Setting Specific Days of the Week:

This setting determines which days the ECO 1^{TM} controller will operate. Choose either watering on specific days of the week, EVEN/ODD days or cyclical from daily up to once every 30 days. The controller's default setting is to water on all specific days of the week.

For example, if you want to water every Tuesday, Thursday and Sunday:

1. Press the O button until the income and the days of the week appear on the screen.

M	Ty	W	Τb	Ē	Sa	Sy
START EVERY						

- 2. Press \bigodot once and ${\bf M}$ (for Monday) starts blinking.
- 3. Press, 🖤 and underscore under M (Monday) disappears. Monday is de-selected.
- 4. Press 🕞 twice and **W** (for Wednesday) starts blinking.
- 5. Press 🖤 and the underscore under **W** (Wednesday) disappears. Wednesday is de-selected.
- 6. Press 🕑 twice and **F** (Friday) starts blinking.
- 7. Press 🖤 and the underscore under F (Friday) disappears. Friday is de-selected.

- 8. Press 🚱 and the underscore under Sa (Saturday) starts blinking.
- 9. Press 🖤 and the underscore under **Sa** disappears. Saturday is de-selected.

```
M TU W TH F Sa Sy II
START
EVERY
DI
```

10. Press the O button to proceed to the next step or to set even/odd days.

Option 2 - Setting Even or Odd Days:

To select EVEN days, ODD days or cyclical days from one day up to every 30 days refer to the following example.

Example: setting the controller to water every 10 days:

- 1. Press the \bigcirc button until the icon and the days of the week appear.
- 2. Press and to skip all the days of the week (underscore must be removed beneath all days).
- 3. Press \bigodot and EVEN appears blinking. (To select ODD days press)

4. Press 💿 again and 1 DAY appears blinking. To select the number of days between watering of 10 days, press 🕢 until 10 appears on the display.

5. To return to a weekly schedule, Press 🕢 and the program returns to the weekly schedule for selecting the day of the week.

6. Press the 🔘 button to proceed to the next step START TIME (1) or to review the program.

8. SETTING WATERING START TIME

The ECO $1^{\scriptscriptstyle \rm M}$ controller can have up to five separate irrigation start times per day.

To set a start time,

1. Press the O button until the (1) icon appears. START 1 will appear on the screen, OFF or the last start time programmed in START 1 is displayed.

2. Press \bigodot and OFF (or the first start time programmed) begins blinking.

- 3. To set the desired first start time hour (note AM and PM designations), press
- 4. Press () and the minutes start blinking.

(A) or (M

5. Press 🔊 or 🕜 and set the desired start time minutes.

6. Press again, the second start time and OFF (or the last start time programmed) appear blinking.

- 7. To set the desired second start time hour (note AM and PM designations), press or or .
- 8. Press () again and the minutes begin blinking, press () or () to select the watering start time in minutes. Repeat the steps to set the third and if needed the fourth and fifth start times. During programming, the screen also shows which days the controller will operate.

Press the \bigodot button to proceed to the next step RUN TIME $\overline{\mathbb{M}}$ or to review the program.

9. SETTING WATERING RUN TIMES

Note: If you have already set a SimpleSmart[™] ET preset (example: SP02) and then change the run time, your SimpleSmart[™] program will be turned OFF. You must reactivate the SimpleSmart[™] programming each time you adjust your run time (see section 10).

This setting determines the length of time the EC0 1^m smart controller will allow the valve to remain open (duration is from 1 minute up to 6 hours). For example, setting watering run time to 10 minutes on certain days of the week will program the controller to turn the water on for 10 minutes on each of the days chosen and at every start time selected.

To set the watering run time $\overline{\mathbf{M}}$:

- 1. Press the 🔘 button until the 👿 icon appears and OFF or the last run time setting appears.
- 2. Press the 🕑 button, and OFF (or the last run time programmed) appears with hours blinking.
- 3. To set a desired watering run time in hours, press 🐼 or 🖤 and select the number of hours.

- 4. If only watering duration in minutes is required, press 🕑 to skip the hour digit, and the minutes will start blinking.
- 5. To set the desired watering duration in minutes (example of 10 minutes), press or or to select minutes. When programming the watering duration the screen will also show the days the controller will operate.

NOTE: If the last data entered stops blinking after 10 seconds, press \bigcirc again to resume or \bigcirc to move backward.

Press the 🔘 button to proceed to the next step SET ET 🔊 or to review the program.

10. SETTING THE SIMPLESMART[™] OPTION (SET ET)

The ECO 1[™] controller's main feature includes twenty preset programs for sprays and drip irrigation based on three years of historical evapotranspiration (ET) from various climate regions.

How DIG's EC0 1[™] controller operates using Historical Evapotranspiration (ET):

After programming the watering schedule, watering start time and watering duration, the user can select one of the preset SimpleSmart[™] evapotranspiration (ET) programs for spray or drip irrigation systems. See the color map in the centerfold of this manual to select the appropriate pre-set for your location and type of system or reference CHART A on page 22 and choose from the region description.

Selecting SP1 through SP20 sets the EC0 1[™] controller to water a predetermined number of minutes per month. The amount to water is pre-programmed into the controller and is determined by which program (SP) is selected and by the month.

If you have already set a SimpleSmart[™] ET preset (example: SP02) and then change the run time, your SimpleSmart[™] program will be turned OFF. You must

reactivate the SimpleSmart[™] programming each time you adjust your run time (see section 10).

NOTE: If using one of the SimpleSmart[™] presets we recommend evaluating the plants' health for the first month and making adjustments to the system as needed. If an adjustment or fine tuning of the SimpleSmart[™] programming is required, this adjustment can be made for each month in the SEASONAL ADJUSTMENT (%) SETTING (see section 11).

For example:

The user entered watering run time will be adjusted monthly based upon the forecast ET pattern for the selected region.

By selecting SP02, the controller may adjust the programmed run time of 10 minutes in the month of January to 3 minutes, or less. This reduces the irrigation run time by 7 minutes, providing a water savings of nearly 70% for the month of January.

PROGRAM	REGIONS	IRRIGATION METHOD
SP01	Cool Mediterranean	Drip Systems
SP02	Cool Mediterranean	Sprinkler Systems
SP03	Humid Continental	Drip Systems
SP04	Humid Continental	Sprinkler Systems
SP05	Warm Mediterranean	Drip Systems
SP06	Warm Mediterranean	Sprinkler Systems
SP07	Humid Sub-Tropical	Drip Systems
SP08	Humid Sub-Tropical	Sprinkler Systems
SP09	Highlands	Drip Systems
SP10	Highlands	Sprinkler Systems
SP11	Dry Inland Valleys	Drip Systems
SP12	Dry Inland Valleys	Sprinkler Systems
SP13	Tropical Wet & Dry	Drip Systems

CHART A - SELECTING HISTORICAL ET PROGRAM

SP14	Tropical Wet & Dry	Sprinkler Systems
SP15	Tropical Wet	Drip Systems
SP16	Tropical Wet	Sprinkler Systems
SP17	Semi-Arid	Drip Systems
SP18	Semi-Arid	Sprinkler Systems
SP19	Arid	Drip Systems
SP20 Arid		Sprinkler Systems

To activate the SimpleSmart[™] ET feature:

1. Press the 🔘 button until the 🚺 icon appears and OFF appears.

2. Press 🚱 and OFF (or the last SP program #) appears.

3. To select a desired SimpleSmart[™] preset press (or () and select one of the twenty programs from the list using one that is similar to your climate region and irrigation method (see map in centerfold or reference Chart A).

- 4. To deactivate the preset program, press 🕑 and the program # appears blinking.
- 5. Press 🖤 until OFF appears.

Press the O button to proceed to the next step SET BUDGET I or to review the program.

11. SETTING SEASONAL ADJUSTMENT (MONTHLY BUDGET)

The amount of water required by plants varies throughout the year. The Seasonal Adjustment percentage feature can be utilized to alter the programmed watering run time on a monthly basis.

This program features two options:

- **A.** It can be used as an adjustment to the programmed run time by altering the programmed watering duration on a monthly basis.
- B. It can be used to modify the total run time setting of the SimpleSmart[™] programming per month by percentage.

To set seasonal adjustment in %:

1. Press the O button until 100% and the current month # appears.

- 2. Press the 😥 button and the 100% appears blinking.
- 3. To set the desired seasonal adjustment % (0-200%), press () or (). *Example, if a 20 minute duration is programmed, and then the monthly budget is changed from 100% to 50%, the duration will now be 10 minutes for the selected month.*

4. Repeat the steps to set the desired seasonal adjustment % for each month by pressing () and following the previous steps for each month.

Press the O button to proceed to the next step RAIN DELAY $\underset{\text{man}}{\textcircled{O}}$ or to review the program.

12. RAIN DELAY SETTING

The Rain Delay setting is used to temporarily suspend all irrigation for a defined number of days. For example, during rainy weather regularly scheduled programs can be turned off from 1-99 days. At the end of the designated period, regularly scheduled programming will resume automatically.

To set a temporary suspension of the program:

1. Press the O button until the C icon appears and OFF appear.

- 2. Press the 🕑 button and OFF starts blinking.
- 3. To set the desired temporary suspension of the program (1-99 days), press or \bigcirc .

4. The temporary suspension of the program can be cancelled at any time by re-entering Rain Delay screen and changing the setting to OFF. (Press or or or until OFF appears.)

Note: OFF appears in between numeric value of 99 and 1. Press the \bigcirc button to proceed to the next step EVENTS OFF \widehat{X} or to review the program.

13. EVENTS OFF SETTING

This mode allows the user to program the timer to not water during specific months of the year, or to program the timer to not water on specific days of the week during a specific month.

To turn off specific days of a month:

- 1. Push the \bigotimes button until the desired month is selected and DAYS appear above the \bigotimes symbol. The number of the month is on the left (1 = January, 12 = December).
- 2. Push the 😥 button until the desired day of the week flashes.
- 3. Push the to remove the underline under the day of the week. During the selected month, watering will not occur on the days of the week without the underline.

To turn off an entire month:

- 1. Push the Q button until the X icon appears.
- 2. Push the 🚱 button through each day of the week until the MO appears above the 🕅 icon.

3. When On is flashing for the desired month to turn off, push the 🕥 button and the word OFF will appear. The selected month is now turned off, and no watering will occur during the entire month.

The controller is now fully programmed.

Press the O button to review the program or to return to the home screen.

Here is an example of the home screen showing all the icons of the programs that are currently set and active, which is the SimpleSmart[™] (**SET ET**), monthly budget, rain delay and events off programs.

14. MANUAL WATERING

The manual mode allows the user to test the system and water for a specified run time. The controller will automatically close the actuator or valve at the end of the defined irrigation period. The originally programmed irrigation schedule continues to function at the times assigned. The sensor condition is disregarded in this mode.

To start a manual run,

1. Press the O button, and the N icon and icon appears. ON appears momentarily and then the last watering duration is displayed with I N

The controller will open the valve and in 10 seconds a count down of the remaining irrigation duration appears, showing when the controller will close the valve.

- 2. Press the 🔘 button to end manual run.
- 3. After 10 seconds the display will revert to the current time screen.

15. CONNECTING A RAIN SENSOR

Most "normally closed" rain or soil moisture sensors can be connected to the ECO 1^{TM} controller. The function of the sensor is to prevent automatic watering by the set program due to excessive rainfall or when the soil is too moist.

To connect the sensor to the controller, please follow these steps:

- 1. Cut the yellow wire loop that exits the controller in the middle of the loop.
- 2. Strip approximately 1/2 in. of insulation from the end of each wire.
- 3. Splice one yellow wire to each of the wires coming from the sensor.

Use waterproof wire connectors to secure the connections.

- 4. Follow the sensor manufacturer's instructions for calibrating the sensor.
- 5. When the sensor is active and preventing automatic operation, a si icon will appear on the display.

Icon will only appear when sensor is active.

Recommended rain sensors are the Rain Bird RSD and Hunter Mini-Clik Recommended soil moisture sensor is the Irrometer WEM-B

16. MAINTENANCE, TROUBLESHOOTING AND REPAIRS

To restore the controller to the default settings (Budgeting and Rain Delay settings will remain):

- 1. Press the O button until the *START EVERY* is displayed and the icon appears on the bottom left of the screen.
- 2. Press and hold down the \bigtriangleup for three seconds.
- 3. The screen returns to the home screen (clock) and all the default settings are restored. The current time and date is retained.

PROBLEM: Water is flowing out under the anti-siphon cap.

CAUSE: Valve is not installed at least 6 in. above the highest outlet on the system

SOLUTION: Raise valve up so it is at least 6 in. above the highest outlet on the system

CAUSE: Anti-siphon float is obstructed or stuck

SOLUTION: Unscrew anti-siphon cap and check float assembly and clear out any debris or foreign material inside.

CAUSE: Valve is installed backwards.

SOLUTION: Reverse valve and make sure arrow on valve body is pointing away from water source.

PROBLEM: Valve/actuator is not opening automatically or manually

CAUSE: No water pressure

SOLUTION: Open main water supply valve

CAUSE: Faulty solenoid

SOLUTION: Replace solenoid

CAUSE: Flow control handle is turned down SOLUTION: Open flow control handle on valve or actuator

PROBLEM: Valve/actuator functions in manual mode but not automatically CAUSE: Controller is set to OFF mode SOLUTION: Verify that controller does not show OFF in current time mode CAUSE: AM/PM not set correctly in current time mode SOLUTION: Check current time, change AM/PM if necessary CAUSE: AM/PM not set correctly in start time mode SOLUTION: Check start time(s), change AM/PM if necessary CAUSE: Watering restriction or rain delay is preventing watering SOLUTION: Remove watering restrictions or set rain delay to off CAUSE: Yellow sensor wires have been cut SOLUTION: Re-connect sensor wires together with waterproof connector CAUSE: Sensor is installed and is in a state that prevents watering SOLUTION: Check sensor and wire splices and verify sensor is normally closed

PROBLEM: The display is blank

CAUSE: No buttons have been pushed in the previous 15 minutes SOLUTION: Push any button

PROBLEM: Valve/actuator fails to close

CAUSE: Valve/actuator is installed backwards SOLUTION: Check flow arrow and verify arrows points away from water source CAUSE: Debris is blocking solenoid port SOLUTION: Shut off water supply, unscrew and remove solenoid, then open water supply and flush out solenoid port, re-install solenoid

PROBLEM: Rain sensor does not prevent watering

CAUSE: Rain sensor is normally open, malfunctioning, or not wired correctly SOLUTION: Verify that sensor icon appears on display when pin is pushed

down & check all wire splices

PROBLEM: Controller waters more than once per day CAUSE: More than one start time has been programmed SOLUTION: Change start time 2,3,4, and 5 to OFF

17. WARRANTY

DIG CORPORATION warrants these products to be free from defects in material and workmanship for a period of three years from date of purchase. This warranty does not cover damage resulting from accident, misuse, neglect, modification, improper installation or subjection to line pressure in excess of 80 lbs. per square inch for anti-siphon valves and for actuators. This warranty shall extend only to the original purchaser of the product for use by the purchaser.

The obligation of DIG CORPORATION under this warranty is limited to repairing or replacing at its factory this product which shall be returned to the factory within three years after the original purchase and which on examination is found to contain defects in material and workmanship. DIG CORPORATION SHALL IN NO EVENT BE LIABLE FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY KIND; THE SOLE OBLIGATION OF DIG BEING LIMITED TO REPAIR OR REPLACEMENT OF DEFECTIVE PRODUCTS. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU.

Unattended use for prolonged periods without inspection to verify proper operation is beyond the intended use of this product, and any damage resulting from such use shall not be the responsibility of DIG CORPORATION. There are no warranties, which extend beyond the description on the face hereof. In the case of purchase of the product for use other than, for irrigation purposes, DIG CORPORATION hereby disclaims any implied warranties including any warranties of merchantability and fitness for a particular purpose. In the case of the product for personal, family or household purposes, DIG CORPORATION disclaims any such disclaims any such warranties to the extent permitted by law. To the extent that any such disclaimer or implied warranties shall be ineffectual, then any implied warranties shall be limited in duration to a period of three years from the date of the original purchase for use by the purchaser. Some states do not allow limitation on how long an implied warranty lasts, so the above limitation may not apply to you.

In order to obtain performance under this warranty, the unit must be returned to the factory, along with proof of purchase indicating original date of purchase, shipping prepaid, addressed as follows:

DIG CORPORATION, 1210 Activity Drive, Vista, CA 92081. Repaired or replaced units will be

shipped prepaid to the name and address supplied with the unit returned under warranty. Allow four weeks for repairs and shipping time. Repair of damaged units not otherwise within warranty may be refused or done at a reasonable cost or charge at the option of DIG CORPORATION.

This warranty gives you specific legal rights, and you may also have other rights, which vary from state to state.

18. TECHNICAL ASSISTANCE

Should you encounter any problem(s) with this product or if you do not understand its many features, please refer to this instruction manual first. If further assistance is required, DIG offers the following customer support:

TECHNICAL SERVICE USA

- DIG's Technical Service Team is available to answer questions in English and Spanish from 8:00 AM to 5:00 PM (PST) Monday-Friday (except holidays) at 800-344-2281.
- Questions in English and Spanish can be emailed to questions@digcorp.com or faxed to 760-727-0282.
- Specification documents and manuals are available for downloading in English and Spanish at www.digcorp.com.
